

Session Agenda

Microsoft Copilot & AI-Assisted Engineering

6 Feb 2026 • 11 AM – 1 PM

MS Teams • AI Club Session #2

AI Fundamentals

~25 min

- Origins of AI — 1956 to ChatGPT
- Deep Learning & Transformer revolution
- How LLMs actually work (tokens, attention, hallucinations)
- AI strengths, limits & the "lost in the middle" problem
- Temperature, context windows & why AI can't do math

Microsoft Copilot Deep Dive

~35 min

- Copilot architecture — GPT-4 + Microsoft Graph + your data
- Word, Excel, PowerPoint, Teams, Outlook — real demos
- Prompt engineering with CRISP framework
- Advanced: "/" references", chaining prompts, Copilot Pages
- IP safety — what to share vs. what NEVER to upload

Copilot for All Engineering Teams

~40 min

- CAE — solver debugging, meshing scripts, correlation reports
- Design — DFMEA, GD&T, BOM change management
- Homologation — regulation compare, type approval, CoP
- ADAS — scenario generation, sensor fusion, SOTIF
- SW Dev — embedded C, ASPICE, UDS, CAPL scripting
- Tools — API integration, license mgmt, RPA automation

AI Agents, Takeaways & What's Next

~20 min

- AI agents — what they are & how they're reshaping work
- The human edge: skills AI can't replace
- Your compete-or-collaborate playbook
- Key takeaways — complete session summary
- Q&A and open discussion

AI Agents Are Coming. Here's How You Stay Ahead.

What AI Agents Do

Unlike chatbots that respond to ONE prompt, AI agents autonomously plan multi-step tasks, use tools (search, code, APIs), make decisions, and self-correct — with minimal human input.

Roles at Risk

Report writers: Agents generate reports end-to-end from data

Data entry / formatting: Agents run Excel macros, fill forms, file documents

Basic code generation: Agents write, test, and deploy simple scripts

Routine testing: Agents run regression suites, log results, flag failures

L1 support / triage: Agents classify tickets, run diagnostics, escalate

Automate the Boring

Let agents handle reports, formatting, boilerplate

Elevate Your Work

Focus on judgment, design, innovation, safety

Master AI Tools

Prompt engineering is the new literacy

Your Unfair Advantage

Domain Judgment

AI can't understand WHY a crash sim result matters for vehicle safety. Your engineering judgment is irreplaceable.

AI + You = 10× Engineer

Use agents as force multipliers — let them handle grunt work while you focus on decisions, design, and innovation.

Accountability & Trust

Regulators, OEMs, and customers trust HUMANS. You sign off on safety — AI can't do that. Own that responsibility.

Learn to Orchestrate AI

The new superpower: knowing WHICH AI to use, HOW to prompt it, and WHEN to override it. Be the conductor, not the instrument.

Cross-Domain Creativity

AI optimizes within boundaries. Humans connect dots across disciplines — that's where breakthroughs happen.
